

INSTRUCTIONS: THROWING OUT THE WASTE

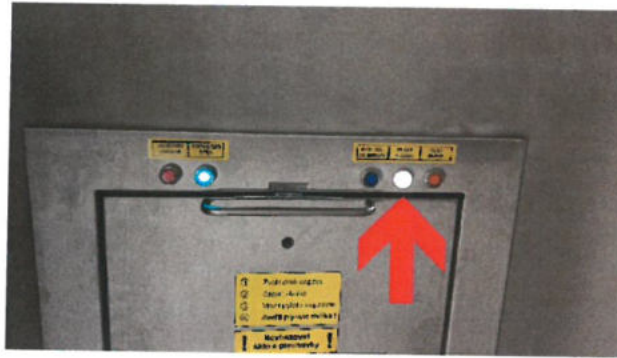

In case of the green indicator being on (see arrow above), the system is fully operational and it is possible to use it accordingly:

1/ choose the type of waste

a) *mixed waste - green light on the left side*

b) plastic waste - white light in the middle

c) Paper waste – yellow light on the left

When switching from one type to another, it is necessary to wait for resetting the damper flaps – it takes about 5 seconds. The action is completed when the light is on and you can hear a “click” sound of unlocking the doors.

2 / open the door - when the door is opened, the red light on the left side turns on - the system tells other users that it is being used

3 / Insert the selected waste into the door pocket - ALWAYS place the waste in the bag. Never place plastic waste, boxes, etc. separately. Waste must not be forced into the door pocket, it must be able to fall freely out of the pocket when the doors are closed.

4 / Close the door - the door lock must be locked (see yellow arrow) - Check if the doors are closed properly by checking the green light on the left side (see first picture).

! ADDITIONAL INFORMATION !

All processes of the system (switching from Unlocked/Locked or Choice of waste type Mixed/ Plastic /Paper) have a time delay of approx. 5 seconds - ALWAYS WAIT FOR THE PROCESS TO BE COMPLETED - the process is completed after the light comes on, accompanied by the characteristic "click" sound. In case the red light is on, it means that you CAN'T use it at this time. Do not try to open the door.

The red light means:

- Any of the doors is currently being used by another person in a different floor
- Door is not properly closed at some floor so the system thinks it is in use even if it's not - therefore please pay close attention to the correct closing of the door - making it easier for everyone and allowing you to use it seamlessly
- The shaft is out of order due to a fault, clogging of excess waste or maintenance.

Do not throw any glass or metal waste. Please put it in the prepared containers at the garage exit on the floor -1.

Please keep surroundings of the waste system clean. We all want Luka Living to be a pleasant place to live. This prevents the unpleasant odor from spreading.

Central waste disposal **CAN'T be used between 10PM and 6AM** due to noise cancellation.
