Basic information on controlling the functions of the apartment

A small screen with a control panel is located on the distribution board where circuit breakers are installed. The same control interface is also accessible from any device with a web browsers at the address:

http://192.168.100.254

Default login data:

Login: number of your apartment
Password: the same as the WiFi password

These default login data may be changed in the system.

Lighting control.

With one click of the button, the lights in your apartment may be turned **on / off**. If you hold the button, you can make the brightness of the light go **up / down.**
You may control the lights and their intensity both through the online interface or using the control panel located on the distribution board. Using the interface, you can also set up various lighting scenes and switch between them quickly.

Heating control

Your apartment is divided into various zones, and each of them is regulated differently. Each zone can have its own temperature set within the **Comfort, Low** and **Minimum** modes. If you choose the **Time Programme,** the system switches between the **Comfort** and **Low** modes automatically. These temperatures may be set up either on the screen located on the distribution board or through the web interface. Heating can also be completely turned off within the individual zones using the main switch in the interface.

Bathrooms use their own autonomous thermostats to regulate the electric floor heating system.

If you apartment is equipped with a thermostat located in the hallway, the main heat supply is regulated for the whole apartment by this very thermostat. If that is the case, we recommend the desired

temperature on this thermostat to be set up to a higher temperature (e.g. 26°C) so that the supply of heat to the individual rooms is not closed.

Control of blinds

Blinds are controlled using the **up / down** buttons. One push of the button moves the blinds in the desired direction by **a small step** (blinds fold or unfold). If you hold the button longer, the blinds go completely **up / down.**

Blinds may also be controlled using the control panel, either on the screen or online. You may use **time programmes** for automatic changes of position. During strong winds, the blinds are automatically drawn all the way up to prevent damage.

The "leaving" function

If you hold the "leaving" button for a long time, you will completely shut all power that goes to appliances and lights. With a double click of the button, just all lights turn off. To turn the function on again, just press any button.
