

Maintenance

1. Stains from water

When water evaporates after rain, water spots may remain on the surface of freshly constructed terraces. This is only a temporary state which will stop occurring after 1 – 2 months. Stains can be cleaned by wiping the surface with steel wool.

2. Mud, dust, etc.

It is recommended to clean the surface of WPC terraces regularly, even if it appears to be clean. This will prevent the buildup of dirt that can cause mold. Remove dirt on the WPC terrace surface by cleaning with warm soapy water. Brush it, if necessary.

3. Scratches, alcohol spills, cigarette stains and other stains that are difficult to remove

Try to remove the stain carefully using steel wool or sandpaper. Then brush the surface and clean with warm soapy water. Before applying any new cleaning product/ methods/ it is recommended to first try it only on a small area in case the new product/method causes any bleaching or damage to the surface.
